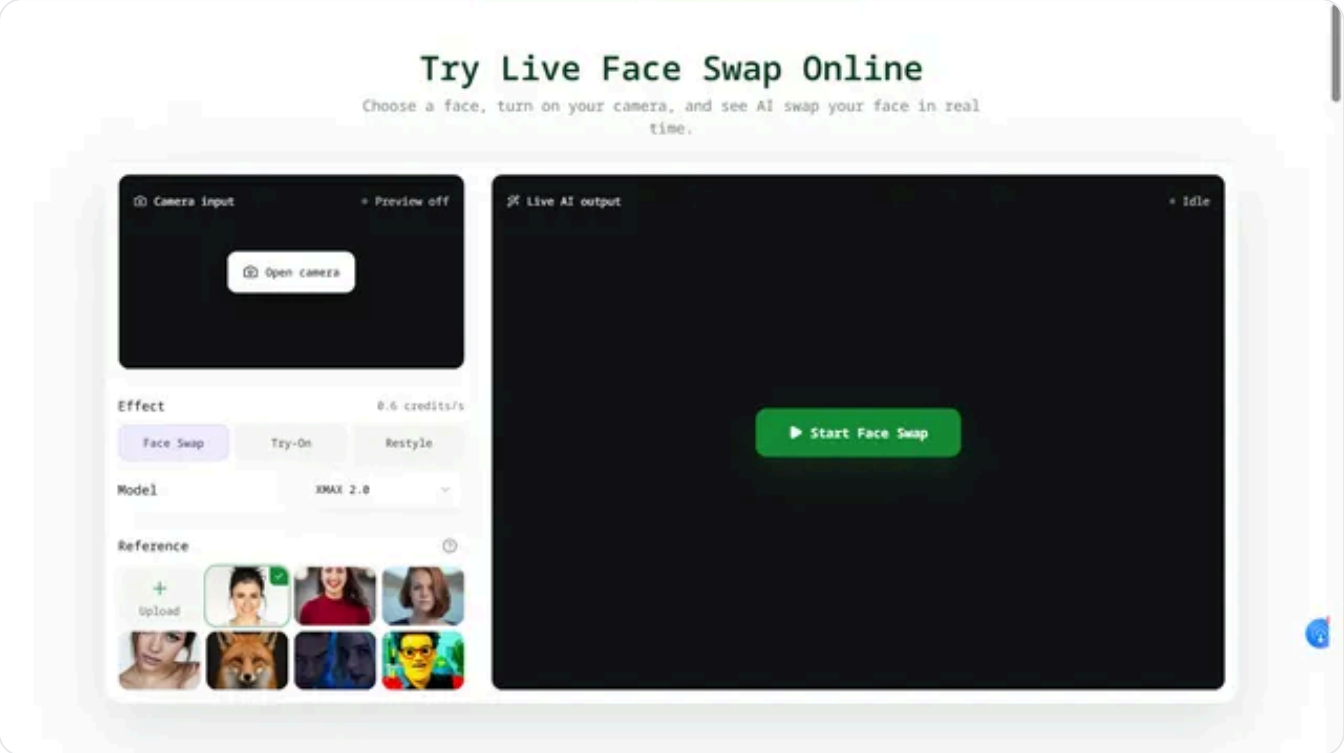
Live Face Swap

Real-time AI face swapping for webcam previews, streaming, and video calls.



About

Live Face Swap is a live face swap tool for seeing AI results on your camera in real time. It offers an online preview that works with your webcam and a desktop app for OBS, streaming, and video calls, so you can test how the effect behaves before using it in a live setup.

What is Live Face Swap

Live Face Swap is a real-time face swap app that shows AI output directly from your camera feed. The web version lets you try the effect online, and the desktop app is positioned for OBS, livestreaming, and video-call workflows. The product page says you

can start with the browser preview, then move to the desktop experience if you want to route the transformed video into other apps.

The site describes it as a webcam-based AI tool with live preview, so it is closer to a camera effect engine than a still-image editor. It also includes related live transformations such as try-on and restyle examples, which suggests the same camera pipeline can be used for more than one type of visual effect.

Key features

Real-time webcam processing: The app shows the swap result while your camera is running, letting you judge the output as you move.

Online preview: You can try live face swap online before downloading anything.

Desktop app for production use: The desktop version is explicitly mentioned for OBS, livestreaming, and video calls.

Reference image selection: You can upload a portrait you have permission to use or pick a preset reference.

Model choice: The interface shows an AI model option, including a model labeled **XMAX-lite**.

Live camera controls: The page exposes controls such as camera input, preview, effect, restyle, try-on, and reference upload.

Privacy note on camera data: The site states that your camera feed is not saved and cannot be viewed by other users.

Free starter access: New users can sign up and get up to 180 seconds free, according to the pricing callout on the page.

How to use it

Open the online preview. Start on the web page and choose the live face swap option so you can test the effect without installing anything.

Pick a reference face. Upload a portrait you have rights to use, or select one of the presets shown in the interface.

Allow camera access. Turn on your webcam and keep your face visible in the frame.

Tune the result. If the swap looks off, adjust lighting, framing, the reference image, or the model choice.

Move to the desktop app if needed. Use the desktop version when you want to connect the AI camera output to OBS or a video-call app.

The interface also shows an effect cost of **0.3 credits/s**, so quick test runs are worth planning carefully if you are working within a limit.

Who it is for

Live Face Swap is built for people who want a **real-time face swap app** rather than an offline image editor.

Streamers who want to test camera effects before going live in OBS.

Creators experimenting with character looks, visual roleplay, or live camera transformations.

Remote presenters who want to use an AI-transformed camera feed in supported meeting or call apps.

Curious users who want to see how a webcam-based face swap behaves under movement and lighting changes.

Video producers who need a quick live preview before recording a scene.

The site's examples also show try-on and restyle modes, so it may appeal to users exploring adjacent camera effects, not just face replacement.

What to know before you use it

Live Face Swap has a few important limits and caveats.

It is not a full editing suite. The product page focuses on live camera output, not detailed post-production tools.

Results depend on your setup. The site itself says a clear, front-facing portrait usually works better, and it recommends adjusting lighting and position if the effect looks weak.

Camera privacy is limited to the stated policy. The page says your camera feed is not saved and cannot be viewed by other users, but you should still review the app's own

Compatibility is not fully specified. The site explicitly mentions OBS, streaming, and video calls, but it does not list every supported meeting platform or operating system in the harvested material.

Use rights matter. The site tells you to upload a portrait you have permission to use, so you should avoid using someone else's image without consent.

Official sources are best for final details. If you need exact credit usage, current pricing, platform support, or model availability, check the app's pricing and guides pages directly before you commit.

Live Face Swap is most useful when you want a live face swap preview first and a desktop workflow second, especially for camera-driven content, and you should verify the latest limits on the official site before using it in a stream or call.

FAQ

Is Live Face Swap free to try?

Does Live Face Swap work in a browser or only on desktop?

Can I use Live Face Swap with OBS and video calls?

What do I need to get a better live result?

Is my camera feed stored or visible to other users?
